

CORSKILL

Designers of Education and Training Systems

Corporate Profile

~ where technology converges with education and training ~

Foreword

In 1990, I designed my first student management system that was specifically designed for the flexible delivery of education and training. In those days we even had to write our own modem software. 1990 seems a lifetime ago and here I am still designing student management systems. However technology is now on our side in that we now have PCs that have processor speed, RAM and hard drive storage burn. When you couple this technology muscle with the Internet and the software now available, even the smallest school and Registered Training Organisation can have a very sophisticated information management system for the management of their student and or trainee history data and the delivery of their education and training programs.

During the last decade I have been continuously involved in the technology based delivery and management of education and training. It therefore, seemed to be a logical step for me to set up my own company, CORSKILL Australia Pty Ltd, for it to focus on the design and development of technology based products for the delivery and management of education and training.

John Sayer
Managing Director

 Corskill Australia Pty Ltd

Mission Statement

*CORSKILL Australia Pty Ltd aims to provide
our clients with the most effective and sustainable
Technology based products within the
Education and Training sectors*

CORE (n. & v.)

the central or most important part of anything
a central part, of different character from its surroundings

~ where technology converges with education and training ~

CORSKILL Australia Pty Ltd

specialists in education and training management

CORSKILL Australia Pty Ltd was established in July 1996 and today, **CORSKILL Australia** has evolved as one of the most significant leaders in the provision of technology based education and training systems.

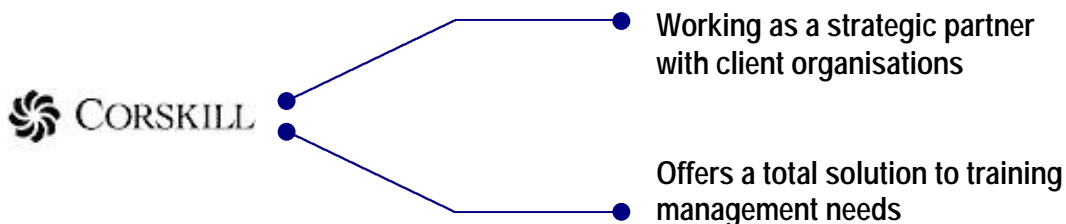

In today's ever-changing learning and working environments, we need learning technologies that reach people across industries and ages, worldwide. **CORSKILL's** products and services are able to go beyond the boundaries of the conventional classroom learning environment to bring a whole new way of education and training to your door.

CORSKILL Australia's main business strength is the design and development of technology based business solutions for the education and training sectors. We are one of the few Australian companies who combine strategic management and technology in designing and developing training management systems to specifically meet our client's needs. **CORSKILL Australia** aims to provide flexible and cost effective and above all, sustainable technology based business solutions for clients in order to assist them to efficiently operate and grow their business.

The **CORSKILL** team believes that any organisation is a dynamic, made up of many interrelated and interacting systems. The complexity of this dynamic in today's education and training sectors is such that to be successful, schools and registered training organisations must employ technology in every facet of their operation. Consequently, our major focus is the design and development of technology based performance support systems that provide ongoing support for schools and registered training organisations and their employees whilst they strive to meet their business goals.

The CORSKILL edge

One of the hallmarks of CORSKILL Australia is our *product innovation*. Corskill management systems are designed to integrate with the client's existing systems to produce a *'total solution'*. Our expertise is founded on years of experience of *'real knowledge of and proven methodologies'* in the development of technology based solutions for the education and training sectors. When you choose to adopt a Corskill Management System to manage your training activities, you *benefit* from this experience.

CORSKILL's edge...

The CORSKILL team is acknowledged within Australia, as one of the leaders in the design and development of training management systems. Continual research is undertaken to include all of the latest developments in the AVETMISS standard, Australian Quality Training Framework as well as the User Choice/Competitive Purchasing requirements.

~ where technology converges with education and training ~

The Proof of Innovation

CORSKILL Australia can proudly claim that it is recognised as an Australian leader in the design and development of AVETMISS compliant Student Management Systems for the Vocational Education and Training sectors.

The **CORSKILL team** has gained its experience by being one of the *first development teams in Australia* to:

- √ Develop a fully AVETMISS compliant Student Management System
- √ Submit data electronically to a State Training Authority
- √ Integrate into the AVETMISS export function, the data required by a State Training Authority to process progress claims
- √ Design a series of PC and network based products that are designed to satisfy any needs of a training provider
- √ Web enable its **CORSKILL Management System** family of products with both student management and training program delivery options available. This web enabled version of the **CORSKILL Management System** family of products is now known as the **CORSKILL Centre**

CORSKILL Australia has successfully completed a range of projects. Key projects have included work in the following areas:

Design, development and implementation of *technology based student learning management systems*

Design, development and implementation of *Internet based learning systems*

Design, development and implementation of a *technology based development methodology for the production of HTML documentation*

Design and production of *print based, self paced learning materials, operator reference manuals and other training documentation*

Design and production of *On-line courseware*

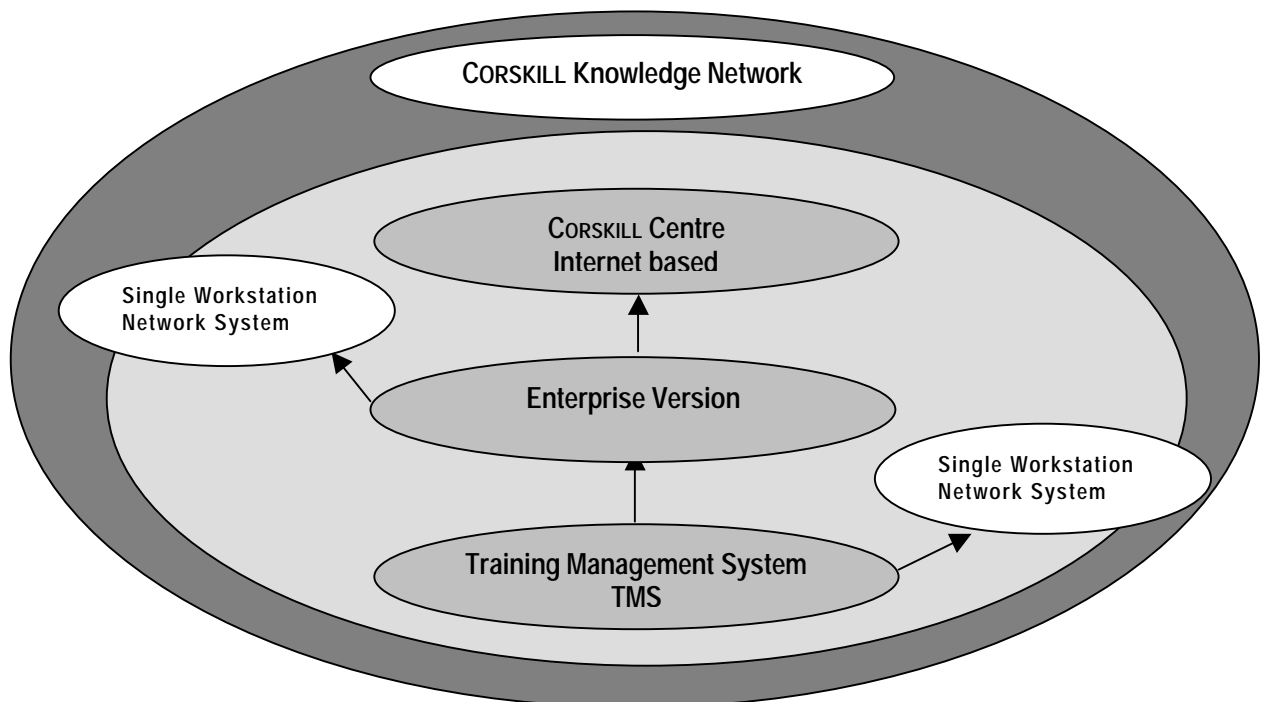

Policy advice on open learning and flexible delivery education and training

The CORSKILL products

CORSKILL's products are designed in such a way that the management systems support the basic needs of a school or training provider as well as the growth of the business by flexibly adding the more complex functionalities as and when the need demands.

Key Benefits

The CORSKILL Management System will take the frustration out of managing your training programs and you will be able to:

- √ Concentrate on working with clients rather than being inundated with administrative work
- √ Lower overheads and transfer savings to the bottom line
- √ Meet the requirements of any AVETMISS compliance audit that you will be required to undertake

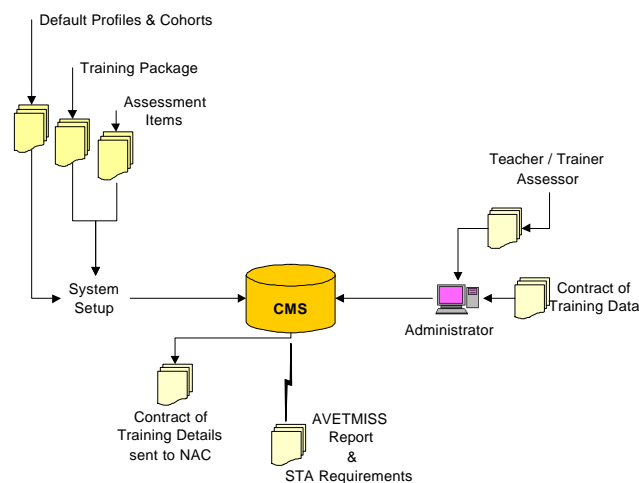

~ where technology converges with education and training ~

CORSKILL Management Systems

Training Management System (TMS)

The Single Workstation System incorporates the CORSKILL Management System on one computer. The Network System stores all data in a central location, usually on a server. This allows a number of users to access the data from workstations on a local area network.

Benefits

- ✓ The formal enrolment of the learner after their training agreement has been registered
- ✓ The compilation of all of the AVETMISS data and its transfer electronically to the State Training Authority
- ✓ The generation of all data required to submit a progress claim to the State Training Authority

CORSKILL Management Systems

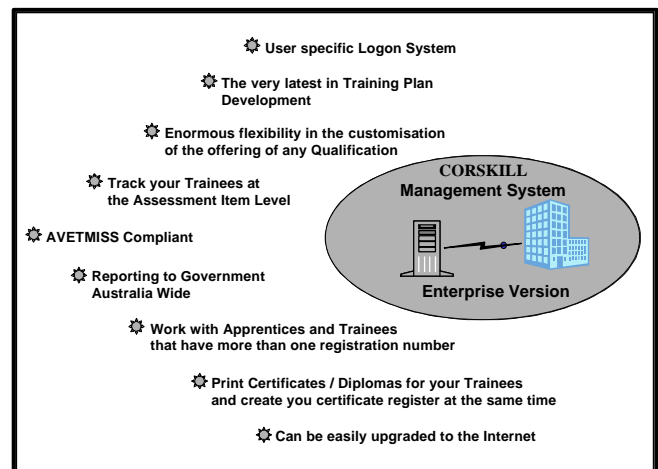

CORSKILL Management System ~ Enterprise Version

The **Enterprise Version** has all the functionality of the current version of the **CORSKILL Management System ~ TMS** PLUS the enhanced functionalities illustrated.

Benefits

- ✓ Simplifies the process associated with becoming AQTF compliant
- ✓ Generates training plans that are not only AQTF compliant but also meet the contractual requirements of User Choice and Competitive Purchasing
- ✓ Saves time and money in the management and administration of trainees progress throughout their program of training

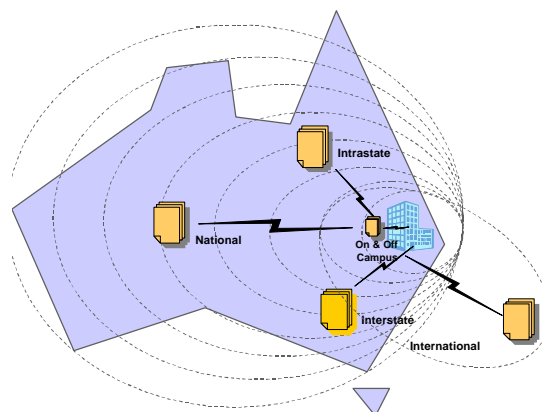

As the needs of the training organisation changes, the Enterprise Version may be upgraded at any time to the CORSKILL Centre

CORSKILL Management Systems

The **CORSKILL Centre** is an Internet based student management and training program delivery system that will not only give you and your staff access to your student history data, regardless of location, but can also give you the ability to deliver your training programs via the Internet. When you use the **CORSKILL Centre**, traditional state, interstate and international boundaries cease to exist for your organisation.

The **CORSKILL Centre** also supports an online college delivery capability. The **CORSKILL Centre Online College** capability not only allows you to deliver your training program online but also gives your students access to your student administration and support functions via the Internet. However, you can choose to adopt the **CORSKILL Centre** student management functionality without the **CORSKILL Centre Online College** functionality.

Benefits

- √ The capability to operate an online college and reach students at any location both nationally and internationally
- √ Capable of accepting enrolment and student history data from any location
- √ The ability to customise each and every student's training plan
- √ Access to real time student history data
- √ Saves time and money by reducing data entry effort
- √ Takes the hard work out of AVETMISS reports and reconciles your progress claims and payments easily
- √ A system that complies with the Australian Quality Training Framework

CORSKILL Centre Knowledge Network

**The Knowledge Network integrates with your existing
Student Management Systems**

The **CORSKILL Centre Knowledge Network** is an information management system that has been specifically designed to integrate with your existing Student/School Management System and to support the development of School/College based Knowledge communities, especially in relation to:

Communication among the college community

Teaching practice and learning experiences

Student support services

College administrative practices

The objective of this **Knowledge Network** is to create a *window* through which any aspect of a student's progress throughout their program of study and life at the school is fully transparent to the student themselves as well as their parent and or guardian.

Each member of the school community is encouraged to participate in the operation of the school/college with the Knowledge Network providing the information management and communication infrastructure at the heart of the school community participation

Supporting the creation of Knowledge Communities

~ where technology converges with education and training ~

CORSKILL Centre Knowledge Network

CORSKILL Australia believes that the schools sector is going through a watershed period where there is a movement nationally toward the creation of knowledge communities around each individual school. These knowledge communities are hallmarked by the use of Internet, Intranet and networking technologies to create Virtual Private Networks at each school/college. CORSKILL has developed the CORSKILL Centre Knowledge Network to satisfy the need that schools/colleges have in the development of a Virtual Private Network.

The CORSKILL Centre Knowledge Network takes student, parent, teacher and curriculum data from existing school/college student management systems, and gives each and every system user access to the areas of the Knowledge Network that concerns them personally. This includes having access to information in relation to the school administration, student support, and the extra-curricular activities conducted by the school/college.

Benefits

- ✓ Provides a Learning Management Environment that engages the whole school's community activities
- ✓ Tracks and records the activities of students in school, vocational education and training, and could include work and other learning
- ✓ Teachers can design and create their own student progress/personal development reports
- ✓ Designs a system so that students' achievements are ready to be 'banked' with the State's Studies Authority
- ✓ Provide students and their parents or guardians with easy access to information about their achievements and progress
- ✓ Use technology to improve Internet access to education and training

Examples of Project Experience

Construction Training Queensland

CORSKILL Australia has customised its CORSKILL Centre for Construction Training Queensland so as they can administer training being delivered as a result of grants being allocated by the Building Industry Training Fund. This system also administers the issue and renewal of the construction Industry SkillCard*. The SkillCards* are printed daily on card stock similar to that used in the issue of Credit Cards.

Queensland Mining Industry Advisory Board

CORSKILL Australia has customised its CORSKILL Centre for the Queensland Mining Industry Advisory Board (QMITAB) so as it can administer the issue of generic induction passports to people working in the Mining industry across Queensland. There are currently approximately 38000 current passports being administered by the system with approximately 1500 renewals and initial passports being issued monthly. The passports are printed daily on card stock similar to that used in the issue of Credit Cards.

Australian National Training Authority (ANTA)

Developed a tool that web enabled CD ROM based courseware that had been developed for ANTA by other development organisations.

Developed a assessment planning and assessment item development tool for the Community services training package in partnership with the business faculty at RMIT

The development of the Tourism and Travel Toolbox. This Toolbox project met all prescribed outcomes of the tender specification and was completed and submitted to ANTA within the specified timelines.

Australian Defence Force

CORSKILL Australia developed a Student Management System to administer the School of Army Education's distance education program nationally.

Project Experience...

DEETYA

A national project for DEETYA aimed at providing Online access for SME's to information with respect to the training available to them Australia wide.

Tourism Training Queensland

An Online system for Tourism Training Queensland called TASTE, a system aimed at providing Online access to information with respect to the training available to the Tourism and Hospitality Industry Queensland wide.

Queensland Open Learning Network

CORSKILL Australia has developed a series of Internet based training modules aimed at providing people living in rural remote areas of Queensland with the skills to use the Internet as a part of their every day life. This project was sponsored by the Queensland Government - Queensland Online project.

QANTAS Airways

CORSKILL Australia has developed a series of Internet based modules that are aimed at the provision of training of ground services staff employed by QANTAS Airways and its subsidiary companies globally. QANTAS College Online is delivering these modules globally.

P@tt Online Delivery

CORSKILL Australia designed and developed an Internet based, training and development system for Techworks Pty Ltd, an Adelaide based organisation. This system currently provides the core technology for the Techworks Learning System.
