

## CARE Web at a glance:

CARE Web is all about recording the support the school finds that it has to make available from time to time for individual students to be successful in their chosen program of study.

CARE Web has been designed for use by the school counselling and mentoring staff to record:

1. The special needs of individual students and the accompanying strategies to provide for and support the student throughout their program of study
2. The results of any formal testing program in which the student participates
3. The content of Individual Education Plans developed for individual students. The CARE Web has a version control process that allows for the creation of many Individual Education Plans as a student moves through their planned development process
